

Installation notes (upgrade)

Requirements:

- Microsoft Windows 2000, XP, Vista, 7 & 10; Home, Professional and Business editions.
- Microsoft Excel: any version from '97 on (32-bit editions only of Microsoft Office 2010 and later).
- Windows 'Administrator' privileges for installation.
- Any prior version of Act- f_x installed.

Before upgrading:

If you have added yields to the Gilt Yields table file (aslGiltYields.txt) then it is suggested that you save this to another location and copy it back after installation to ensure it is not overwritten in the installation process.

Installation procedure:

- Ensure that Excel is **not** running before starting the installation.
- It is not necessary to uninstall manually the prior version of Act- f_x before running the upgrade setup program.
- If the downloaded installation set-up file has been saved, double click on the file name in Windows Explorer to run the installation set-up program.
- There may be a pause in display of messages after the 'preparing to install' message but please wait and the installation will continue.
- A short-cut to a ReadMe file giving further information is placed on the Windows Desktop after installation.
- Installation assistance is available from Actuarial Solutions Ltd using the contact details below.
